

A GUIDE TO THE HOME RENOVATION/ADDITIONS PROCESS

Step 1: Getting Started/ Pre-Design

- ▶ Obtain property plat/site plan
- ▶ Verify current Zoning designation & requirements
- ▶ Hire a Site Surveyor or Civil Engineer to provide a house location plan and boundary survey
- ▶ Architect meets with client to determine scope of work
- ▶ Architect performs a field survey & documents existing conditions

Step 2: Design Process/ Permit Review

- ▶ Architect develops base plans/record drawings for use in developing design options for review by the client
- ▶ Upon approval of the design and preliminary budget estimate, the Architect develops the Construction Documents for Permit Review and approval

Step 3: Contractor Bidding/ Construction

- ▶ Architect solicits Contractors on behalf of the client to provide competitive bids. This includes visits to the property to respond to questions
- ▶ Upon receipt of the Building Permit, the Architect assists the Owner in entering an Agreement with the selected Bidder, and provides Construction Administration Services as the Client's representative throughout the Construction process
